 - 2 Boreholes
 - Sophisticated Filtration System with telemetric monitoring
 - Water Credits
 - Offsetting Site
 - Expert Planning Assistance

Objective

To provide a private water supply system for an eminent hotel and spa to save money, provide an injection of capital, reduce the hotel's carbon emissions and support their green credentials.

About the project

Nicholls worked closely with the hotel to design, supply and install the complete water offsetting solution to provide 100% of the hotel and spa's water requirements. The volume of water required meant that the system needed an Environment Agency abstraction licence which the Nicholls Team were able to complete, having undertaken this process many times for numerous other clients.

Working with the experienced Nicholls Water Credit Team our client has been able to sell the water credits to various developers which paid for the installation of the system and provide a significant boost to the hotel's finances, along with a significant annual saving on ongoing water bills.

The Nicholls Servicing and Maintenance Team will look after the system into the future.

Should you wish to know more about this type of project or have any general water credit questions, please contact our Nicholls Water Credit Team.

"This has been a great project to work on and we are very happy for all involved. We have installed a fantastic system; our client has saved on running costs for their business, along with a capital injection and the developers involved are able to progress their planning applications. Win! Win! Win!"

Ben Nicholls, Owner/Director
